S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Rilievo calcareo dove gli habitat segnalati con codice sono costituiti da: formazioni rupestri a Buxus sempervirens (5110); arbusteti a Juniperus communis (5130), riferiti all'ordine Prunetalia spinosae; pascoli dell'alleanza Phleio ambigui-Bromion erecti (6210); boschi di Quercus ilex (9340) inquadrabili nelle associazioni Orno-Quercetum ilicis e Cephalanthero-Quercetum ilicis. Nell'area sono presenti, inoltre, boschi di Ostrya carpinifolia, dell'alleanza Laburno-Ostryon ed estesi arbusteti a Cytisus scoparius che interessano i rilievi semipianeggianti carsici più elevati

4.2 Quality and importance

Questo sito si contraddistingue per la presenza di un'estesa lecceta, mista con caducifoglie, tra le meglio conservate (con nuclei di fustaia) e più rappresentative (dal punto di vista floristico) dell'Umbria. Tali boschi costituiscono un ottimo esempio di vegetazione a sclerofille sempreverdi con caducifoglie, aspetto tipico delle leccete interne appenniniche. Tra la fauna è stato segnalato Buteo buteo, Falco tinnunculus e Sitta europaea (poco comuni), Lepus europaeus (fondamentale nella catena alimentare dell'aquila reale) e Mustela putorius (specie vulnerabile e rara).
