Other Site Characteristics

Complesso montuoso calcareo che comprende il settore più elevato dell'Appennino umbro-marchigiano e due vasti sistemi di piani carsico-tettonici (S. Scolastica e di Castelluccio di Norcia). La copertura vegetale dell'area a seguito delle molteplici condizioni bioclimatiche e geomorfologiche comprende più tipi di vegetazione: montana (boschi di *Fagus sylvatica*, e pascoli a *Bromus erectus*); alto-appenninica (praterie a *Sesleria apennina*, pareti rocciose, brecciai a *Drypis spinosa*) e degli ambienti umidi ed acquatici (cariceti, prati umidi a *Ranunculus velutinus*, vegetazione idrofitica).

4.2 Quality and importance

Area di eccezionale valore naturalistico ed ambientale. L'importanza risiede nel complesso floristico-vegetazionale delle sue coperture che, ricordiamo, sono rappresentate da circa 15 diversi habitat. Importantissimo e meritevole di tutta la tutela possibile è anche il patrimonio faunistico, come pure l'intero contesto ambientale che, in linea generale, ben sopporta il contenuto impatto antropico operato sul suo territorio. Tra la fauna segnalata si ricorda: *Agrypnia varia* (Tricotteri), specie rara; *Buteo buteo*, specie poco comune; *Capreolus capreolus*, reintrodotta, ma importante per la catena alimentare del lupo; *Cettia cetti*, specie stenotopa indicatore di qualità della vegetazione ripariale; *Charadrius morinellus*, poco comune; *Dama dama*, introdotto, ma importante per la catena alimentare del lupo; *Grammotaulis nigropunctatus* (Tricotteri), specie stenotopa di acque astatiche; *Hypocamptus brehmi* (Crostacei), specie rara; *Lepus europaeus*, importante per la catena alimentare dell'aquila reale; *Maculinea arion* (Lepidotteri), specie vulnerabile; *Matres martes*, specie molto rara; *Mixodiaptomus lilljeborgi* (Crostacei), rara, stenotopa di acque astatiche; *Mustela putorius*, specie vulnerabile e rara; *Neomys fodiens*, specie molto rara e stenotopa; *Oxychilus clarus* (Molluschi), poco comune; *Rana graeca*, specie vulnerabile; *Speleomantes italicus*, stenotopa e vulnerabile; *Sus scrofa*, importante per la catena alimentare del lupo; *Tanymastix stagnalis* (Crostacei), stenotopa di acque astatiche; *Adicella cremisa* (Tricotteri), specie stenotopa di prati marcitoi.
