Other Site Characteristics

Incisione valliva, situata sul versante occidentale del Subasio, con modeste balze rocciose e, sul fondo del fosso, piccole forre. Il manto vegetale, oltre agli habitat segnalati con codice ed attribuiti all'alleanza Crautoneurion (7220) ed all'associazione Cephalanthero-Quercetum ilicis (9340), è costituito da boschi di Ostrya carpinifolia, dell'associazione Scutellario-Ostryetum, e da rimboschimenti a conifere con intenso rinnovamento di latifoglie decidue. Sui versanti detritici esposti a sud sono, inoltre, presenti boscaglie a Quercus pubescens (91H0).

4.2 Quality and importance

La lecceta di alto fusto dell'Eremo delle Carceri è una delle più importanti dell'Italia centrale, soprattutto per la presenza di alberi secolari e la completezza ed omogeneità delle caratteristiche fisionomico-strutturali del bosco. Tra la fauna da segnalare anche Potamon fluvatile fluvatile (specie in progressiva rarefazione), Sylvia melanocephala (poco comune e legata alla macchia mediterranea).
