4. SITE DESCRIPTION

4.1 General site character

Habitat class	% Cover
N12	20.0
N10	80.0
Total Habitat Cover	100

Other Site Characteristics

Piano carsico, drenato da un inghiottitoio, che si presenta completamente asciutto in estate e parzialmente inondato nel periodo primaverile. La vegetazione delle aree non ancora poste a coltura è costituita da prati umidi dell'associazione Hordeo-Ranunculetum velutini e, nel settore più depresso e prossimo all'inghiottitoio, da prati palustri dell'associazione Caricetum gracilis.

4.2 Quality and importance

Il sito racchiude unottimo esempio, per completezza floristica e stato di conservazione, delle praterie umide del Ranunculion velutini, alleanza di vegetazione tipica dei piani carsici appenninici e quindi estremamente localizzata. Nella ricca flora prativa spicca Ophyoglossum vulgatum, entità rara a livello nazionale.
