Other Site Characteristics

Complesso montuoso calcareo dove, oltre agli habitat segnalati con codice ed attribuiti a: Prunetalia spinosae (5130), Asperulo purpureae-Brometum erecti, Filipendulo vulgaris-Trifolietum montani, Astragalo sempervirentis-Seslerietum nitidae e Plantago holostei-Helianthemetum cani (6210), Poo violacee-Nardetum (6230), sono presenti estesi e compatti boschi di Fagus sylvatica, dell'associazione Polysticho-Fagetum ed, ai margini del sito, alcune formazioni a Quercus cerris, dell'ordine Quercetalia pubescenti-petraeae, interrotte da cespuglieti a Cytisus scoparius, dell'alleanza Pruno-Rubion ulmifolii. Nelle zone sommitali del Monte Coscerno sono, infine, presenti estesi pascoli a Sesleria apennina dell'associazione Carici humilis-Seslerietum apenninae; inoltre sul versante nord si trovano piccoli nuclei con Vaccinium myrtillus, attribuiti al Luzulo sieberi-Vaccinietum myrtillii.

4.2 Quality and importance

Si tratta del migliore esempio di ambiente montano presente in Umbria, al di fuori del Gruppo dei Sibillini, poichè i tipi di vegetazione montana dell'Appennino centrale sono rappresentati nel modo migliore e completo. Spiccano per la grande estensione: le faggete (generalmente ben conservate e con ampie zone governate a fustaia) ed i pascoli dei Festuco-Brometalia, che presentano aspetti floristici e fitosociologici diversi in relazione alle caratteristiche geomorfologiche del territorio. Di particolare interesse fitogeografico sono i seslereti di cresta a Sesleria apennina ed i cespuglieti a Vaccinium myrtillus tipici di ambienti alto-appenninici e qui presenti in condizioni di extrazonalità. Nella ricca flora di questi rilievi, oltre ai numerosi endemismi, sono state segnalate: Bulbocodium vernum ssp. versicolor e Gentiana lutea, rare a livello appenninico, Vaccinium myrtillus e Lonicera alpigena, rare a livello regionale. Tra la fauna è stata segnalata anche Rana graeca (specie vulnerabile), Accipiter nisus (specie rara), Buteo buteo, Falco tinnunculus e Montifringilla nivalis (specie poco comuni) Lepus europaeus (fondamentale per la catena alimentare dell'aquila reale).
