- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

L'area coincide con il corso superiore del Tevere. L'andamento del fiume è tendenzialmente rettilineo con pochi meandri. Il paesaggio vegetale originario è ormai ridotto ad una stretta fascia di verde che affianca il fiume lungo le due sponde, con vegetazione igrofila ripariale a dominanza di Salix alba, inquadrabile nell'alleanza del Salicion albae, ma anche da nuclei a dominanza di Alnus glutinosa, vegetazioni queste, purtroppo, invase dalla Robinia pseudacacia che, in molti tratti, appare dominante. Di particolare interesse la zona dei "Laghi Spadi" o "Colombari" originatisi in seguito all'abbandono di vecchie cave di ghiaia in ambito golenale ed interessati da coperture acquee di subalveo che hanno dato origine ad ambienti secondari di elevato interesse naturalistico per l'avifauna migratoria.

4.2 Quality and importance

In questo ambito del fiume la copertura vegetale si presenta per lunghi tratti fortemente rimaneggiata ed alterata; tuttavia in alcuni limitati settori sono presenti lembi di vegetazione ripariale a dominanza di Salix alba in discreto stato di conservazione, pur se estremamente ridotti in larghezza. Tra la fauna da segnalare la presenza di: Theodoxus fluviatilis (specie rara in progressivo calo), Leuciscus cephalus (specie autoctona importante rispetto alla banalizzazione della comunità ittica), Buteo buteo, Cettia cetti, Falco tinnunculus, (specie poco comuni) Neomys fodiens (specie stenotopa molto rara) e Suncus etruscus (specie stenotopa rara).
