- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Rilievi collinari di natura marnoso-arenacea dove le coperture vegetazionali sono date, quasi esclusivamente, da boschi di Quercus cerris e Ostrya carpinifolia, inquadrati nell'Aceri obtusati-Quercetum cerris.

4.2 Quality and importance

I valloni di questo sito si contraddistinguono per essere quasi completamente disabitati. Tuttavia molto intenso resta l'utilizzo a ceduo dei boschi di caducifoglie submediterranee, che rappresentano la vegetazione tipica delle colline marnoso-arenacee dell'Umbria. Tra la fauna da segnalare anche Leuciscus cephalus (specie autoctona), Buteo buteo (specie poco comune).
