- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Vasta area collinare, di natura marnoso-arenacea, che si contraddistingue per l'alternanza di boschi (che rivestono le aree più acclivi), arbusteti e campi. Le formazioni forestali sono costituite prevalentemente da cerro (*Quercus cerris*) che, a seconda dell'esposizione dei versanti, si associa al carpino nero (*Ostrya carpinifolia*) o alla roverella (*Quercus pubescens*). Solo sui versanti più elevati tali formazioni, inquadrabili nell'associazione *Acero obtusati-Quercetum cerris*, vengono sostituite da boschi puri di cerro, dell'ordine *Quercetalia pubescenti-petraeae*. Gli arbusteti, che ricoprono parzialmente le aree pascolative a brachipodio (*Brachypodium rupestre*) dell'associazione *Centaureo bracteatae-Brometum erecti*, sono costituiti per lo più da ginestra (*Spartium junceum*), ginepro rosso (*Juniperus oxycedrus*) o rosa selvatica (*Rosa canina*). Molto interessanti sono gli arbusteti a salici (*Salix* sp. pl.), che ricoprono, a fasce molto larghe o a grossi nuclei, i primi terrazzi del Fiume Chiascio.

4.2 Quality and importance

Nonostante la presenza di diversi elementi di pressione antropica si rileva un elevato interesse naturalistico per la presenza di specie rare e/o localizzate. Inoltre la scelta di quest'area, posta nella parte centrale dell'Umbria, tende ad individuare ambiti di raccordo per corridoi faunistici tra la parte Est e la parte Ovest della Regione.
