- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Complesso montuoso calcareo dove, oltre agli habitat segnalati con codice ed attribuiti a Prunetalia spinosae (5130), Asperulo purpureae-Brometum erecti e Brizo mediae-Brometum erecti (6210), Polysticho-Fagetum (9210), sono presenti boschi di Quercus cerris dell'ordine Quercetalia pubescenti-petraeae, che si sviluppano su paleosuoli fersiallitici e, alle quote più basse, cedui di Ostrya carpinifolia dell'associazione Scutellario-Ostryetum. Nelle zone pianeggianti sono infine diffusi lembi di prato-pascolo inquadrati nell'alleanza Arrhenatherion.

4.2 Quality and importance

Il sito comprende uno dei più vasti e rappresentativi complessi montani, forestali e pascolativi, del settore occidentale dell'Appennino umbro. In particolare, gli aspetti vegetazionali più qualificati sono: le estese faggete, talvolta con abbondante presenza di Ilex aquifolium e con ampi settori governati a fustaia; le vaste praterie montane aride e semimesofile a Bromus erectus, estremamente ben conservate e ricche da un punto di vista floristico. Tra le specie floristiche, oltre alle endemiche, sono state segnalate Bulbocodium versum ssp. versicolor (raro a livello nazionale) ed Astragalus vesicarius (rara a livello regionale). Tra la fauna è stato segnalato anche Accipiter nisus (specie rara), Buteo buteo, Falco tinnunculus (specie poco comuni), Lepus europaeus (elemento fondamentale nella catena alimentare dell'aquila reale).
