9540 			286.96		G	C	C	B	B

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Area prevalentemente calcarea caratterizzata, a tratti, dalla presenza di terre rosse, sulla quale sono presenti i seguenti habitat segnalati con codice: cespuglieti a *Juniperus oxycedrus*, *Erica multiflora* ed *Erica arborea* (5211), pascoli aridi a *Bromus erectus*, attribuiti all'*Asperulo purpureae*-*Brometum erecti* (6210); pascoli terofitici del Thero-Brachypodion (6220); boschi di *Quercus ilex* dell'associazione Orno-Quercetum ilicis (9340); pinete a *Pinus halepensis* della subassociazione Orno-Quercetum ilicis pinetosum halepensis (9540).

4.2 Quality and importance

Il sito si contraddistingue per la presenza di una estesa lecceta mista con caducifoglie, tra le meglio conservate (molto compatta) e più rappresentative (dal punto di vista floristico) dell'Umbria. Tale bosco costituisce un ottimo esempio delle leccete interne appenniniche. Ugualmente interessanti e rappresentative sono le fitocenosi di sostituzione (pratelli terofitici e cespuglieti a *Erica arborea*, *Phyllirea media* e

Juniperus oxycedrus), che fanno assumere a questo ambito una netta impronta mediterranea. Tra la fauna è stato segnalanto anche Buteo buteo e Miliaria calandra, specie poco comuni.
